The Science of (Fighting) Fake News

Using network science to model, analyze,
and mitigate misinformation diffusion in
social media

June 14-18th, 2021

What I do (and don't....)

- ❖ Academic and industrial research
- ❖ Data and network analysis
- ❖ Models of diffusion processes
- ❖ Social media and data as a resource
 - ❖ the interplay between 'segregation' and 'polarization'
 - ❖ rational motivations
- ❖ I don't debunk, I am not a journalist
- ❖ I don't look for automatic identification of true and false news
- ❖ I do not target social media as evil
 - ❖ I don't believe in censorship or freedom of speech limitations
 - ❖ I don't look for simple explanations to complex problems (e.g., gullible people is also stupid!)

Course overview

- ❖ June 15th:
 - ❖ Problem definition and basic terminology
 - ❖ Introduction to Network Science
 - ❖ Understanding the structure of an information/ misinformation network
- ❖ June 16th:
 - ❖ Introduction to dynamical processes on Networks
 - ❖ Social influence, the emergence of echo chambers and the interplay between segregation and polarization
 - ❖ Studying the impact of fact-checking
- ❖ June 17th:
 - ❖ The role of social bots
 - ❖ Open Problems and Trends

Introduction and Terminology

INFORMATION DISORDER: Toward an interdisciplinary framework for research and policy making

Council of Europe report
DGI(2017)09

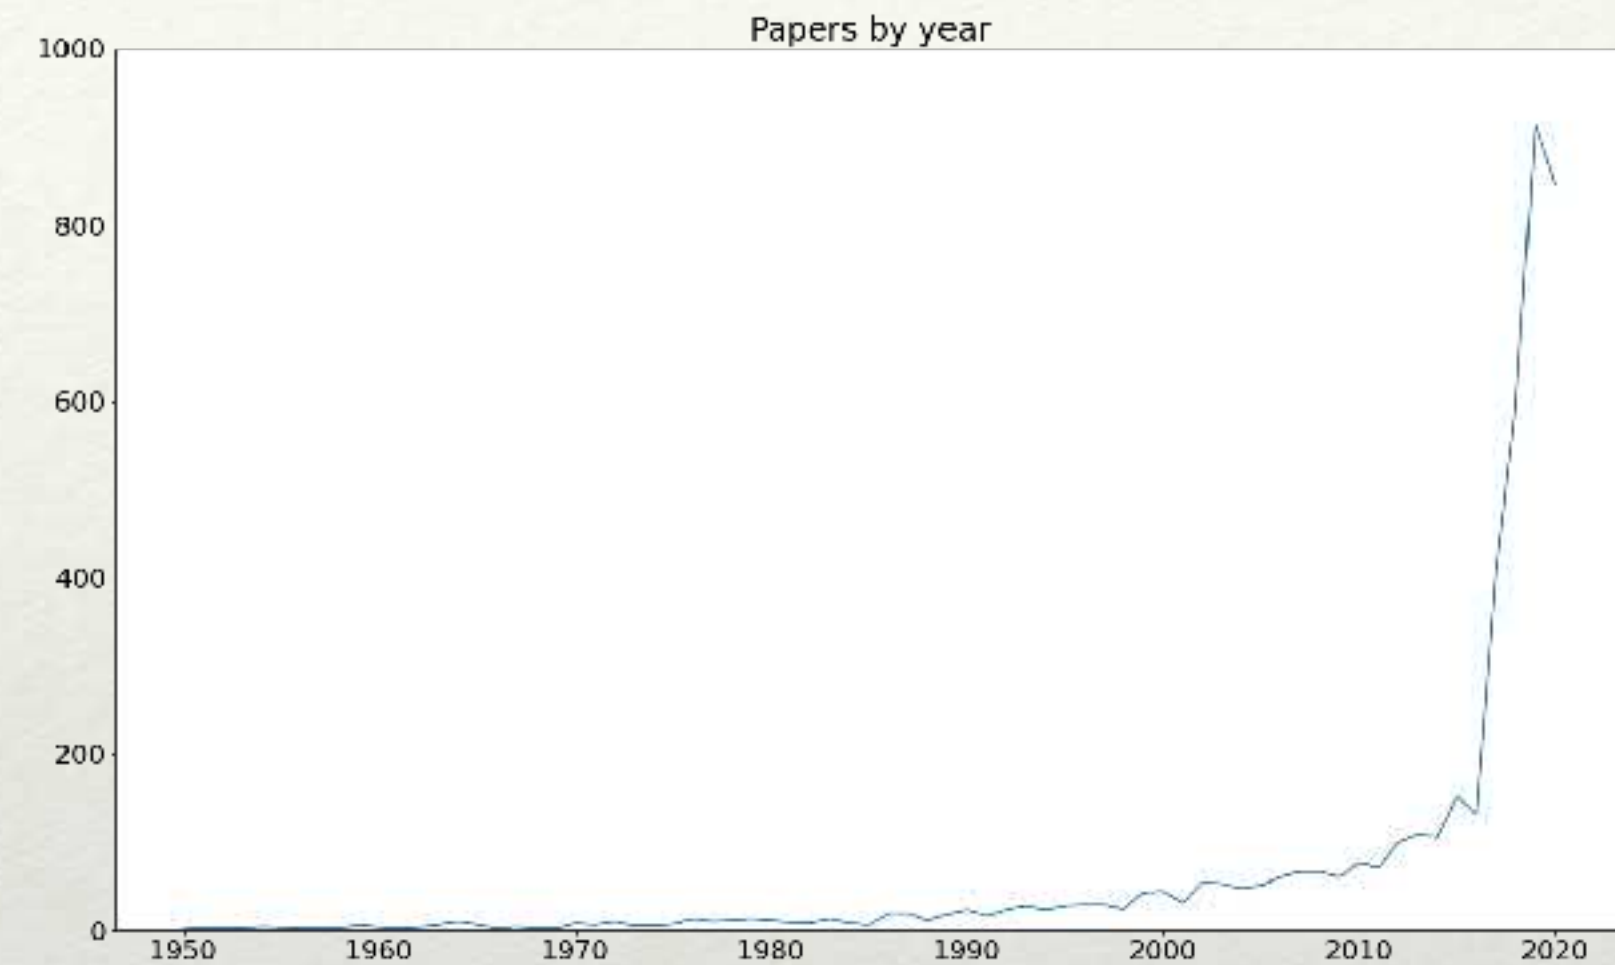

Claire Wardle, PhD
Hossein Derakhshan

Open fronts:

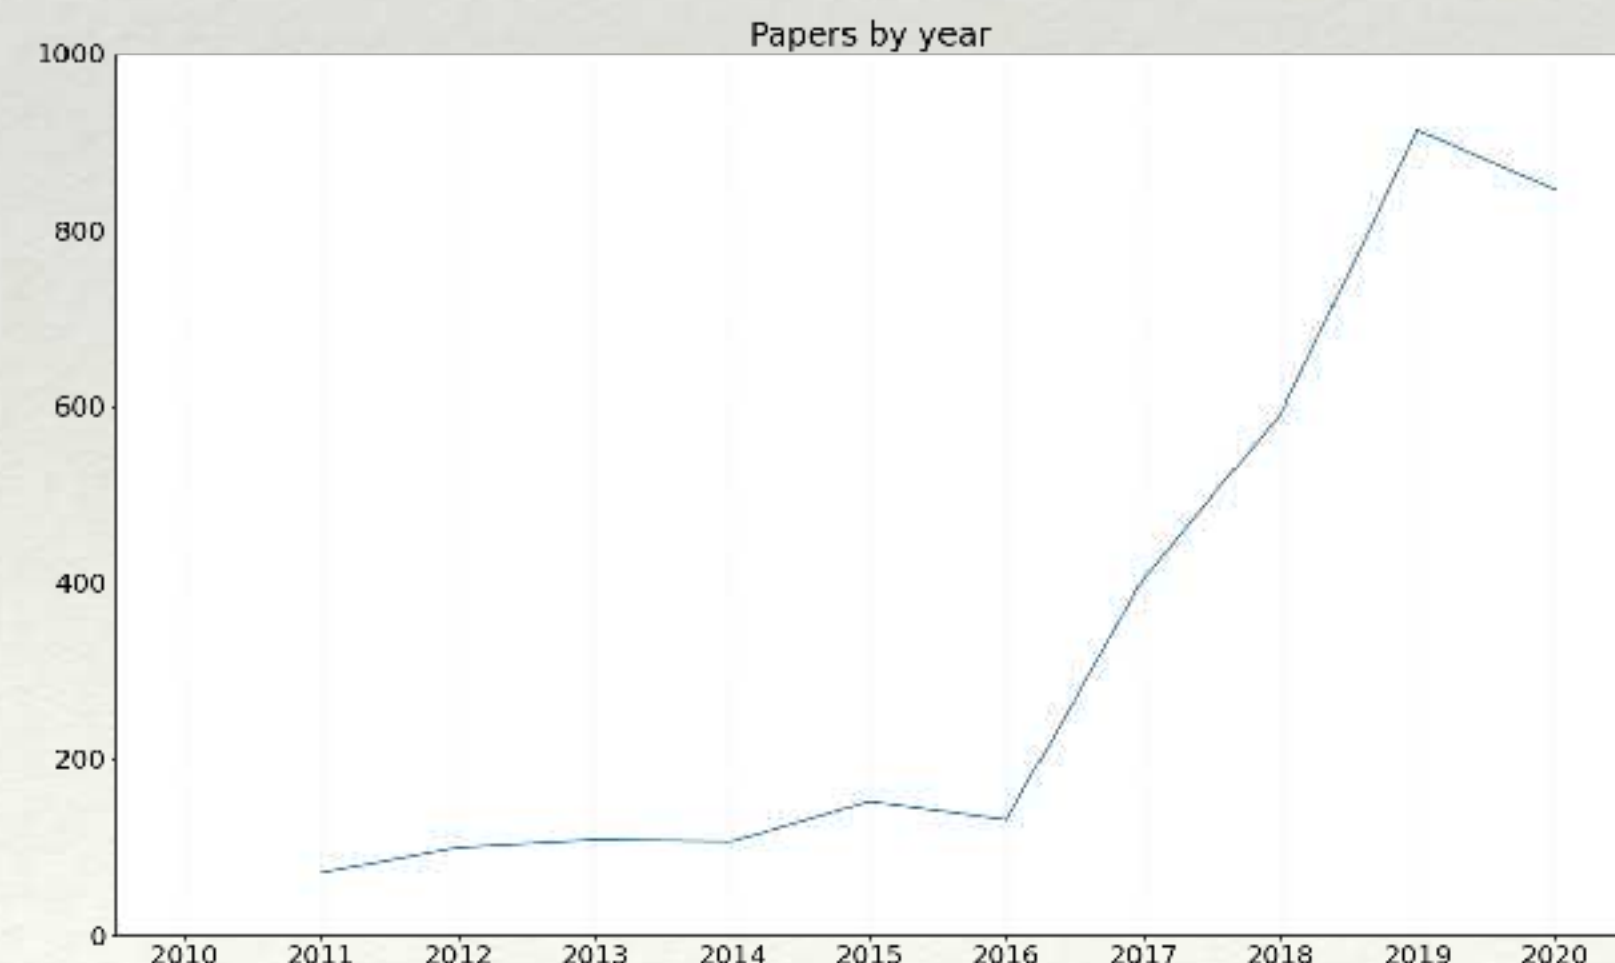

- ❖ defining a language to capture the complexity of the phenomenon
- ❖ implications for democracy?
- ❖ role of television?
- ❖ implications of weakened local media?
- ❖ micro-targeting
- ❖ computational amplification
- ❖ filter bubbles and echo chambers
- ❖ declining trust in evidence

Scientific papers

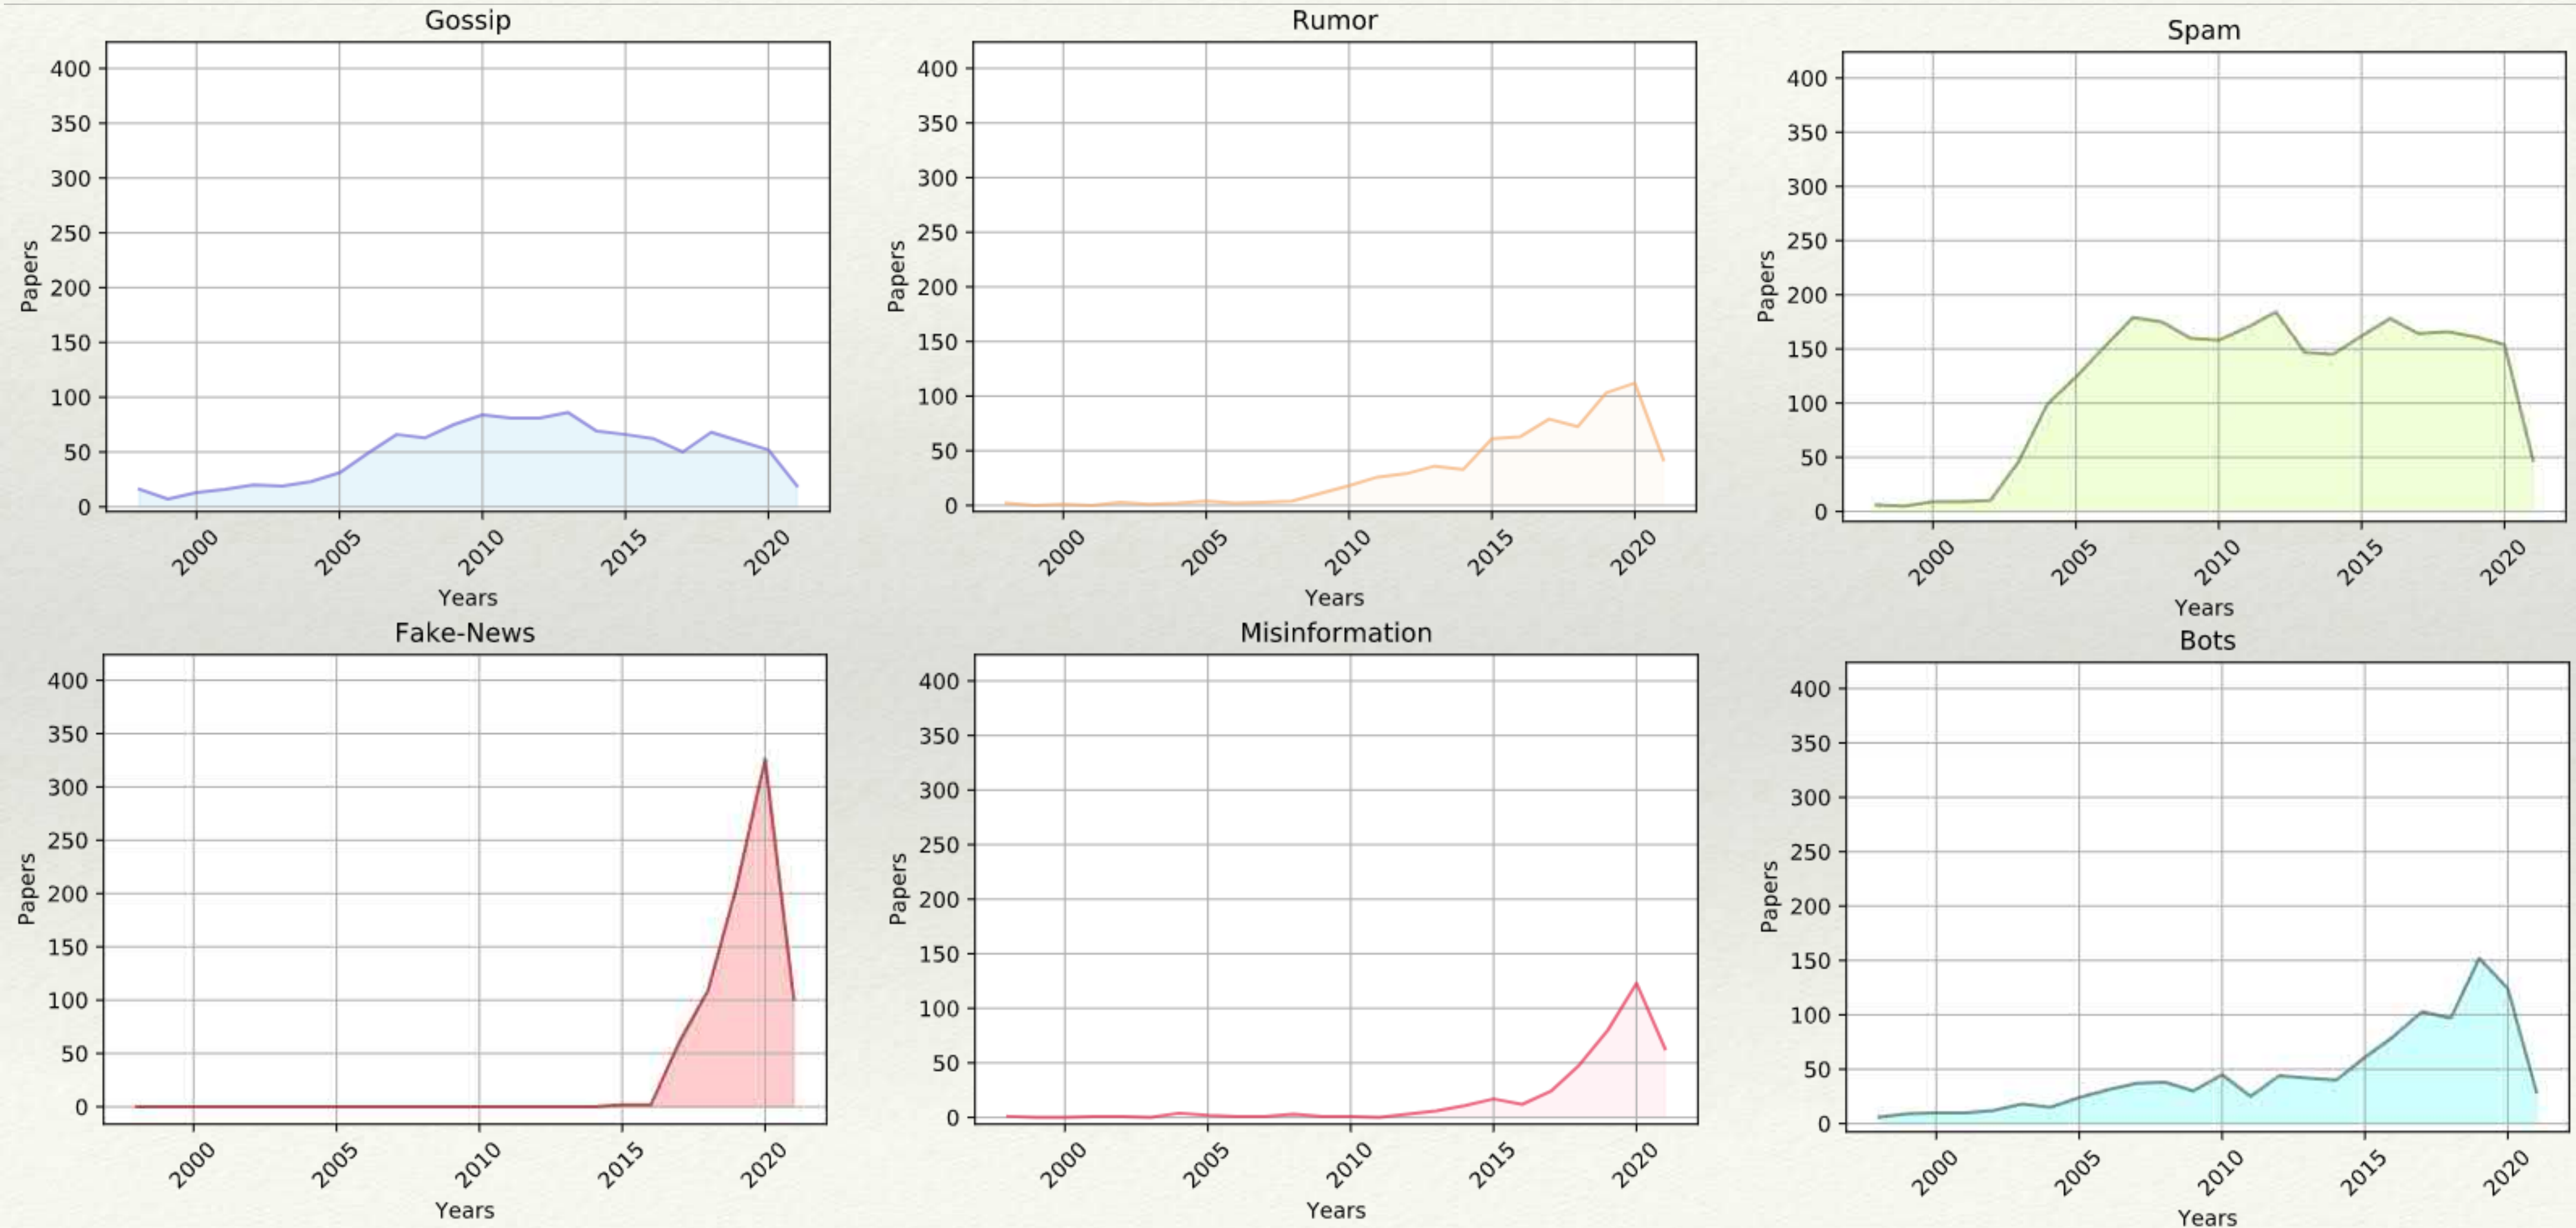

- ❖ How many papers have been published with "fake news" (or related) in the title?
- ❖ We built a dataset from Microsoft Academic, and followed citations
- ❖ **40,971** papers (and still counting...)
- ❖ Explosive growth after 2016

Google Trends

Focusing on DBLP only

Fast growing literature problem

- ❖ Although the problem is considered "new", the literature is huge (and very multidisciplinary)
- ❖ Difficult to find an objective and general point of view
- ❖ This introductory course is necessarily subjective; however we tried to 'discover hidden gems' with a partially automatic search of relevant and potentially influential scientific contributions

40832 PAPERS

Search among thousands of works about the disinformation problem

1518348 REFERENCES

Don't stop to the most popular papers: find the hidden gems!

ALWAYS UPDATED

We update FakenewsResearch each two weeks. Don't miss the latest out!

DOI: 10.1126/science.aao2998

"... much remains unknown regarding the vulnerabilities of individuals, institutions, and society to manipulations by malicious actors."

Prevalence and impact

- ❖ *How common is fake news, and what is its impact on individuals?*
- ❖ On average, an American encountered from 1 to 3 stories from fake news publishers before the 2016 elections - H. Allcott, M. Gentzkow, J. Econ. Perspect. 31, 211 (2017)
- ❖ False information on Twitter is typically **retweeted by many more people**, and far more rapidly, than true information, especially when the topic is politics - S. Vosoughi et al., Science 359, 1146 (2018)
- ❖ By liking, sharing, and searching for information, **social bots** can magnify the spread of fake news by orders of magnitude
 - ❖ Identification of bots is a moving target and will therefore remain major ongoing research challenge
- ❖ Evaluations of the **medium-to-long-run impact** on political behavior of exposure to fake news are essentially nonexistent in the literature.

Potential interventions

- ❖ *How can we empower individuals?*
 - ❖ **fact-checking**, whose efficacy is disputed
 - ❖ **education**, to improve individual evaluation of the quality of information
- ❖ *How can we prevent individuals' exposure to fake news?*
 - ❖ **adjusting social media business models** to increase emphasis on quality information
 - ❖ reducing **personalization** and '**echo-chambers**' effects
 - ❖ removing accounts associated to **bots**, when they are found
- ❖ Content curation decisions are subject to many **ethical considerations**

Main questions

- ❖ Can we find a language and a framework that is able to capture the complexity of the phenomenon?
- ❖ Which are the basic mechanisms that lead to the formation of echo-chambers?
- ❖ To which extent an account controlled by a human is vulnerable and manipulable by malicious actors and bots?
- ❖ How can we mitigate information spreading?

Introduction to Network Science

Networks are "everywhere"

- ❖ Social Networks

- ❖ actors (individuals, also agents)

- ❖ social ties

- ❖ Information systems

- ❖ book, web page

- ❖ citation, link, retweet

Complex Systems

- ❖ Complex != Complicated
- ❖ composed by many **interacting elements**
- ❖ they give rise to emergent **collective phenomena**
- ❖ **emergence**: not directly related to individual phenomena
- ❖ **linearity vs non linearity**
- ❖ **heterogeneous vs homogeneous**

from a local

- ❖ from the interconnection of small units

to global level phenomena

Complex Network Analysis

Epidemics

Social Contagion
